Go anywhere, anytime and read everything that you need such as a menu, map, price tags, clothing sizes, medicine bottles, and the fine print on food labels simply by magnifying and adjusting the image contrast of the SenseView. Available in three models: SenseView LIGHT, SenseView PORTABLE, and SenseView DUO.

## SenseView LIGHT, the pocket magnifier

SenseView LIGHT is the highest quality pocket-size video magnifier on the market today. It's similar in size to a smart phone, so it easily fits into your pocket or handbag. It's black casing gives it a stylish appearance. Carry it with you wherever you go.

### 3.4" AMOLED wide-screen

The AMOLED (Active Matrix Organic Light Emitting Diode) screen offers a brighter and sharper image, especially in B/W or Reverse image. It provides vivid, bright image quality that can be viewed at an angle, unlike a LCD screen. The AMOLED screen also allows you to use SenseView LIGHT even when you are outdoors in the natural sunlight. This is one of the noteworthy advancements in portable video magnifier technology. Additionally, turn off the LEDs to read the display on a backlit screen like a cell phone, calculator or oven.

### Easy to access buttons

SenseView LIGHT features only three easy-to-press, conveniently located control buttons aligned all in a row alongside the display screen.

### High depth of focus viewing

SenseView LIGHT has a higher depth of focus compared with most other pocket-size video magnifiers.

## SenseView Duo, the versatile video magnifier

SenseView DUO is the first portable video magnifier to provide both distance viewing and close-up viewing in one compact magnifier. The DUO combines a distance, close-up and handwriting camera all in one portable device.

### Distance viewing

View objects in the distance such as a street sign, classroom white board, posted bus or subway schedule or even the text displayed on your home TV. You can expect to expand your life with distance viewing.

### Image storing

Store up to 20 images, then recall them and change the zoom or image mode of the saved images to enhance the view.

### Handwriting Feature

Use the SenseView DUO to write checks, sign a credit card receipt or address an envelope with the flip of the reading camera to the handwriting position.

## SenseView PORTABLE, 4.3" LCD

### 4.3" flat-screen LCD

SenseView PORTABLE is your large screen alternative to the SenseView LIGHT. Several text/background color choices are also available.

### Choose 4x - 22.5x in 9 sizes

SenseView PORTABLE offers a wider range of magnification than any other portable video magnifier.
