## Overview

The MiniBlock product line is a multifunctional synthesis platform designed for:

- Solid Phase Synthesis
- Solution Phase Synthesis
- IRORI Kan Cleavage
- Solid Phase Extraction (SPE)

All racks conform to microtiter plate size and shape, providing flexibility for collection, compatibility with dry down devices and ease of use. Using the microtiter plate footprint also keeps the overall system footprint small, making it automation friendly.

The unique valve body design allows the opening and closing of all vessels at the same time. Supporting parts and accessories allow the following functionalities:

- Reactions performed under Inert Atmosphere
- Robust Mixing via Orbital Shaking
- Solvent Dispensing
- Resin and Scavenger Resin Dispensing

MiniBlock reactors and supporting parts are also available in *Personal Sets* and *Synthesis Packages*, which result in cost savings. The Personal set is configured around 2 MiniBlocks. Synthesis Packages are configured around 6 MiniBlocks.
