Advanced.
Technology that makes a difference.

Average Vitreous Flow Rate of 5K Cutters

— 25ga @ 500 mmHg

Efficient Vitrectomy

> 5000 cpm designed to reduce traction and turbulence
> Port located close to cutter tip for controlled tissue removal

Stable Fluidics

> Optimized duty cycle for built-in flow efficiency
> Auto infusion allows surgeon to toggle on/off the BSS

Optimized Visualization

> Dual independent lamps (Xenon and Mercury)
> 3 surgeon controlled filters for increased safety and differentiated viewing

New ESA Technology

> Enhanced blade design for easier insertion
> Excellent cannula retention in the eye
> Trocar tip designed to make tighter Sclerotomy's

Dual-Linear Technology

> Simultaneous parameter access allows better surgeon control
> Adds useful functionality requiring fewer mode changes
> Wireless foot pedal eliminates cord clutter
